

The BUILD Program

Revolutionizing Engineering Education

Ready to Build the Future?

Join The BUILD Program and become the engineering program today's industries desperately need!

With The BUILD Program, students get hands-on training from Day One, build their own equipment, and receive real on-the-job training with an emphasis on collaboration. Transform your institution by combining the essential theory of a traditional engineering degree with the practical, real-world skills that employer's demand.

The Problem We Solve

American engineers need to thrive in modern environments and interdisciplinary teams while blending deep theory with hands-on application throughout the manufacturing process. Unfortunately, there is a growing skills gap between innovation and manufacturing.

The BUILD Solution

From the very first semester, students don't just study engineering, they gain hands-on experience in the industry.

The BUILD Program gives students the opportunity to:

- Design and build actual equipment with their own hands
- Work on real industry projects while earning their degree
- Train side-by-side in cross-functional teams
- Develop a powerful professional network before they graduate

This is on-the-job training integrated into your curriculum: closing the skills gap and preparing your students for the real world from Day One.
